

Analyse

German Polyamide External Trade Activities 2010

2010 production statistics are still pending and should be available not before mid of 2011. But a first check of Germany's 2010 external trade figures documents - against 2009 data - a spectacular comeback after the so called "greatest crash since 1929". In the case of Polyamides the quantities exported in 2010 rose by 29-46%.

Polyamides -6, -11, -12: plus 136442 tons up to 607229 tons
Polyamides: plus 35377 tons up to 112792 tons

Simultaneously significant increases of prices could be achieved (10-30%).
